

Strict-CI test: 95% Wilson intervals recomputed from failure counts (N=100K) — the same test as Table 1.
d=7 uses the leak-free single d7_p015 checkpoint (val-selected, test-reported; clean_d7_eval.json).
Pathfinder is never strictly beaten; the closest cell is d=7 p=0.002, a one-failure difference (PF 5, PM 4).
